About IXON

IXON was founded in 2014 to make cloud connection easier, secure and more accessible for machine builders and users. Headquartered in the Netherlands, IXON is now one of the most valued and easy-to-use Remote Service & IIoT platforms for machine builders and system integrators.

IXON offers an end-to-end industrial service solution with remote access, data logging, dashboards, alarming and much more. The IXON product portfolio consists of the IXON Cloud platform and the IXrouter, an industrial VPN router and data gateway, which is specifically designed to connect machines securely and minimize the risk of data leaks.

IXON is active in over 100 countries and serves tens of thousands of users worldwide. IXON delivers the technology, so machine manufacturers can do what they do best: collaborate with clients, provide service, and share insights.
